

Staff and Resident Safety

Customizable solutions for senior living and long-term care

The ENVisionIT® staff and patient/resident badge system is the sustainable next generation Location-Based Data Solutions for senior living and long-term care facilities.

ENVisionIT® combines cutting-edge staff duress technology with real-time location awareness to enhance rapid emergency response and mitigate on-site incidents with the potential for physical altercations- protecting team members and those in their care.

Staff and Resident Badges

ENVisionIT® badges offer automated supervision including a duress button that can instantly reach security and other personnel directly on mobile devices.

- Duress button creates immediate notification of a person in need
- Notifications include real-time location of person who activated the alert
- Retrace a person's location history to determine possible infection risks
- Provide staff a greater sense of security to increase morale and lessen turnover

Proven capabilities designed to perform in demanding environments to support critical needs like:

- **Staff Duress**
- **Resident Assist**
- **Infection Risk Management**

All senior living and long-term care employers prioritize staff safety. However, facilities remain vulnerable to on-site violence and other emergency situations. Without an effective duress system, staff may be unable to summon help efficiently and effectively during critical incidents, increasing the risk of serious injury and outcomes.

1025

Customize rules and events to create efficient communication of staff and resident needs.

- ENVisionIT® badges can be assigned to staff members and/or residents.
- The alert button feature can send out instant duress notifications to staff and security and include the exact location of where help is needed.
- Each badge reports on all location history and can show a trail of where each person has been and how long they were in a specific location.

Leader in Advanced Duress Solutions for Senior Living and Long-term Care

The most effective staff duress solutions offer immediate alert capabilities, enabling senior living and long-term care workers to quickly notify security personnel and nearby staff when in distress. These systems also provide real-time event tracking to ensure help can be dispatched quickly and accurately.

Advanced Smart Badges with Built-in Safety and Monitoring Features

Offering automated supervision and critical safety features that enhance protection, streamline response, and support infection control protocols.
