

Opportunity: Software Engineer

Purpose:

As an individual contributor, performs technical analysis tasks and writes detailed specifications, test plans and test results/reports for assigned software development tasks. Active contributor to software system architecture and its evolution. Participate in new product development planning efforts and software and systems-related technical resolution reported by technical service, engineering or sales. Responsible for the testing and evaluation of in-house developed, contracted and purchased off the shelf product and system software code. Responsible for managing and eliminating responsible bug lists in order of priority. Responsible for the project management of all assigned software evaluation and testing projects.

Secure Care has developed a cutting edge product in the real-time location systems (RTLS) healthcare space. These systems augment our core wander management and infant security systems, which can be used to help facilities keep employees safe, track assets and improve work flows. We are looking for a bright, articulate, creative and conceptual individual who can take these systems to the next level.

Essential Functions:

- Must have demonstrable experience in Java, J2EE, Javascript, AJAX, C#, Relational Databases, MySQL, Spring Framework, Apache, Web Services, Microsoft Server 2008-2016, Microsoft Windows desktop OS.
- Must have experience working TCP/IP and API development.
- Responsible for the design, development and enhancement of existing code base.
- Experience in performing complete regression testing and software QA of assigned and responsible software development projects
- Able to execute a plan to successfully overcome all bugs required to enable commercialization and release of software.
- Integrate software components into a fully functional software system.
- Develop software verification plans and quality assurance procedures
- Excellent written skills to document code and specifications
- Utilize source control tools (Subversion).
- Desired working experience with Android and iOS mobile applications
- Meets or exceeds schedules with accurate and fully functional results
- Must be able to travel domestically and Internationally and obtain a US passport

Required Knowledge:

- 5 – 10 years' experience
- Proven working experience in software engineering
- Hands on experience in designing interactive applications
- Experience in developing web applications web framework
- Experience in developing system engineering solutions to firmware/software/hardware centric systems based products (*cont'd page 2*)

Cont'd from page 1

- Ability to document requirements and specifications
- Firm understanding of industry-accepted software development methodology and release processes
- Experience using repository software for multiple-user development

Education:

- BS degree in Computer Science or Computer Engineering required
- MS degree in Computer Science or Computer engineering desired
